MAURICIO SAAVEDRA RAMÍREZ

Full Stack Developer | Systems Engineering
316 494 3311 • saavedraramirezmauricio@gmail.com

SUMMARY

Final-year Systems Engineering student, about to graduate. Close to one year of hands-on experience as a Full Stack Developer at Global BI SAS, working on legacy system migration projects toward modern architectures (Angular + .NET with ABP Framework), including UI standardization, development of complete CRUD modules, relational database modeling, and process automation with N8N. Highly diligent and organized, with strong adaptability, attention to detail, and end-to-end problem-solving skills (frontend, backend, and database), with a focus on user experience.

WORK EXPERIENCE

Full Stack Developer — Global BI SAS | *Cali, Colombia* | *Almost 1 year*

- Developed and maintained web applications with Angular, TypeScript, and PrimeNG within a legacy-to-modern architecture migration project with multi-company support.
- Standardized the UI across 25+ screens: unified action columns, configurable column selectors with localStorage persistence, fixed strict-mode TypeScript errors, and resolved text overflow issues.
- Built complete end-to-end CRUD modules (backend in C#/ABP Framework: entities, AppServices, DTOs, AutoMapper profiles, EF Core migrations; frontend in Angular: modal components with cascading dropdowns).
- Designed, wrote, and optimized complex SQL queries and database scripts in SQL Server.
- Automated workflows and internal processes using N8N.
- Regenerated service proxies with NSwag and consumed REST APIs from Angular; localized the application (Spanish) using ABP Framework XML files.
- Contributed to relational database modeling (ER diagrams, primary/foreign keys, normalization); hands-on exposure to Kubernetes, Helm, and Spring Boot microservices.
- Collaborative work with Git: branching, merge conflict resolution, under agile methodologies.

PERSONAL PROJECTS

Lucky Fight — Online Raffle Ticket Sales Platform | *Freelance project for a real client* | *Next.js, Supabase, Wompi*

- End-to-end development of the platform: database modeling, payment integration, notifications, security, and production deployment.
- Designed a relational schema in PostgreSQL (Supabase) with atomic SQL functions (FOR UPDATE SKIP LOCKED) for race-condition-free inventory reservation and unique random raffle number generation.
- Implemented Row Level Security (RLS) and security definer functions, exposing only aggregated data to the public while restricting the service_role key to the backend.
- Integrated the Wompi payment gateway: integrity signature for hosted checkout, SHA-256 signature validation on incoming webhooks, amount verification, and idempotency to prevent duplicate event processing.
- Built Next.js (App Router) API routes with server-side validation and IP-based rate limiting; automated Vercel Cron Jobs to release expired inventory reservations.
- Sent transactional emails via the Resend API (verified custom domain, SPF/DKIM) and deployed on Vercel with GitHub CI, Cloudflare DNS, and HTTP header hardening (CSP, HSTS, X-Frame-Options).
- Built a responsive UI with Tailwind CSS: reusable components, infinite-scroll gallery, validated forms, and an authentication-protected admin panel.

SKILLS

- Angular, React, TypeScript, JavaScript
- HTML5, CSS3
- C# / .NET / ABP Framework
- SQL Server, EF Core, advanced SQL queries
- Database modeling (ER)
- Python
- Process automation with N8N
- Chatbots and conversational workflow integration
- Kubernetes and Helm (basic/practical level)
- Git: branching, merging, version control

EDUCATION

Universidad Libre — Systems Engineering, final year
Centro Colombo Americano — English, 4+ years of study

LANGUAGES

Spanish — Native | English — Advanced

COURSES & CERTIFICATIONS

- AI Fundamentals with IBM SkillsBuild
- Artificial Intelligence Fundamentals – IBM SkillsBuild
- Data Analytics Essentials – Cisco
- Data Science Essentials With Python – Cisco
- Introduction to Cybersecurity – Cisco
- Introduction to Data Science – Cisco
- Introduction to Modern AI – Cisco
- Networking Basics – Cisco
- Network Technician Career Path – Cisco
- Python Essentials 1 – Cisco
- Python Essentials 2 – Cisco
